

Quick start guide for RRS1100

A. To set-up your new digital receiver:

1. Located on the right rear corner are two connectors.

Attach your antenna to the left connector (inside connector).

2. Locate antenna in a window or near an outside wall.

3. Make sure receiver is switched off (turn front knob to left), and then plug the unit into a standard electrical outlet.

4. Turn on the digital receiver via the knob on the front.

5. There will be a “ticking” sound for about 12 seconds.

The programs of your audio information service should follow.

6. If you do not hear the service programs, please use the following procedure to scan for the audio information service signal in your area (See instructions).

Quick start guide for RRS1100 (continued)

B. Scan instructions:

- 1. Verify antenna is properly connected and oriented.**
- 2. Unplug digital receiver from electrical outlet.**
- 3. Turn on the knob on the front panel.**
- 4. Plug the digital receiver into the electrical outlet.**

[This initiates the internal scan procedure for the audio information service in your area. The receiver will make a “ticking” sound every second for about 4 minutes indicating that the receiver is scanning.]

- 5. After scanning is complete, the “ticking” sound will stop and the digital receiver will play your audio information service.**
- 6. If you do not hear the audio information service, try moving the antenna and repeat the scan procedure.**
- 7. If you still do not hear your audio information service, please contact your service provider.**
